

STAINLESS STEEL COOLING SYSTEM

SELF-CONTAINED, NO SUMP REQUIRED

SELF CONTAINED STAINLESS STEEL SYSTEM

No Sump Required

The stainless steel system is designed for the user who wants the ultimate system. This system is highly corrosion resistant and has almost unlimited life. Our unique stainless steel system is made with precision computer controlled machinery. The stainless steel trough has enough water capacity that no sump is required, thus producing a completely self contained system.

FEATURES

- Stainless Steel Cooling System.
- Self-contained water trough.
- No troublesome installation and maintenance of a sump.
- Standard bleed line to prevent buildup of salts and minerals in recirculating water.
- Stainless steel pipe cover - except when used with AquaCel pads.
- Simple, efficient design, lets Quietaire offer its products at extremely competitive prices.
- Float Valve water hose attachment automatically refills trough as evaporation occurs.
- Extremely long life.
- Supplied in 5 and 10 foot sections - can be custom cut.
- For use with 4" or 6" pads.
- These qualities add up to high efficiency cooling for your greenhouse.
